DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1-35 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

For any claim of inventions carrying out a display for displaying the P picture(s), or B picture(s); and the step of displaying the P picture(s), B picture (s).

Note the display can display a reconstructed or decoded picture such as a decoded or reconstructed I, P, B picture (s) but not a encoded or compressed I, P, B picture(s).

Appropriate correction is required.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-35 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chen et al. (US 2001/0026677 A1).

Art Unit: 2613

Re claims 1-35, Chen teaches a system for encoding and decoding a progressive refresh bitstream, the system comprising:

an encoder (104 of fig. 2) for encoding video into the progressive refresh bitstream, the progressive refresh bitstream comprising a plurality of P-pictures;

a decoder (102 of fig. 2) for decoding the P-pictures; a transmission medium for carrying the progressive refresh bitstream from the encoder to the decoder; means for zeroing out pixels of the P-pictures;

and a display (200 of fig. 3, e.g. the system contains a display for displaying the P-pictures) for displaying the P-pictures,

wherein the decoder decodes a first P-picture containing a first section, the first section comprising one or more I-slices (fig. 1), and wherein the display displays the first P-picture with the pixels (page 3, [0025]) by replacing a recovered I complete picture with P frame before displaying.

It is noted that Chen does not teach particularly zeroing out means zeroes out pixels of the first P-picture, except for the pixels that correspond to the first section, However, Chen suggests that the decoded P-frame information would be discarded, the decoded P-frame information is interpreted as a P picture section that is not I-slices section is discarded, blacked out, or zeroed out. Therefore, it would have been obvious to one of ordinary skill in the art to use the discarding the decoded P-picture for the zeroing out the P section to get the same result as claimed.

Chen further discloses the above technique is used for another P-pictures as shown in figure 1.

Art Unit: 2613

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Kayama (US 2002/0048321 A1) discloses an apparatus and method for decoding an MPEG picture stream.
